```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., bhred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapphing information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St.
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc Louis

```
SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is CTD-2005A22; the clone sequenced to the right is RP11-65M18. Actual start of this clone is at base position 1 of RP11-575B4; actual end is at base position 187431 of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          derived from one plasmid subclone, base position 102011 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /rpt_family="L1"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 52 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Jul 18, 2002 this sequence version replaced gi:20976361

                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 66 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                              3

The sequence, are useful in the diagnosts, prevention and treatment of diseases including infections, pain, cancer, diabetes, anorexia, bulimia, asthma, parkinson's disease, acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders such as anxiety, schizophrenia, manic depression, depression, delirium, dementia and severe mental retardation, and dyskinesias including Huntington's disease and Gilles dela Tourette's syndrome. The present sequence is the HGRL101 partial coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel G-coupled protein receptor, HGRL101 useful for treating diseases such as microbial infections, cancers, obesity, asthma, diabetes, hypotension, osteoporosis, myocardial infarction, stroke, ulcer, allergy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2001-226617/23.

                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel genes (AAI99548-AAI99604) and proteins (C (AAM99936-AAM99984) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are C isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast can dovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (C (b) immune disorders e.g. Addison's disease, allergies, autoimmune colitis, crohn's colitis, (c) cardiovascular disorders such as myocardial ischaemias; (c) cardiovascular disorders such as myocardial ischaemias; (c) cardiovascular disorders such as myocardial ischaemias; (c) disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (c) disease, multiple sclerosis, rheumatoid arthritis and contains and cepilepsy; and (f) infectious diseases such as viral, bacterial, fungal cand parasitic infectious diseases such as viral, bacterial, fungal contains infections.

CC objects The sequence data for this patent did not form part of the corm will only at fitp. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                is also useful for identifying compounds useful for treating other schizophrenia. These compounds are also useful for treating other neurological and psychiatric diseases, e.g. (depression, anxiety, bipolar disease, affective disorders, attention deficit hyperactivity disorder/attention deficit disorder, epilepsy, neuritis, neurasthenia, neuropathy, neurosis, Alzheimer's disease, Parkinson's disease, migraine and senile dementia. The invention also provides genetic screening procedures that entail analysing a person's genome with respect to GPCR. The vectors are useful for the recombinant production of the GPCR's. The present DNA sequence encodes human CON222 G protein-coupled receptor (GPCR) protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention provides human G protein coupled protein receptor (HGPRP) polypeptides and polymucleotides encoding them. The polypeptides can be produced by standard recombinant methodology. The polymucleotides and polypeptides may be used in the prevention, treatment and diagnosis of diseases associated with their inappropriate expression. Diseases that can be treated are cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis and hepatitis), cancers (e.g. leukemia, melanomas and adenocarcinoma), immune disorders (e.g. anemia, asrhma and Crohn's disease) and neurological disorders (e.g. epilepsy, Alzheimer's disease and Barkinson's disease). The anti-hGPCR antibodies may also be used as diagnostic agents for detecting the presence of HGPRP polypeptides in samples (e.g. by persyme linked immunosorbant assay (ELISA)). Sequences ARZ90521-526 represent CDNA fragments encoding the HGPRP polypeptides in the presence of the presence of the procession of the proces

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                  Matches
                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                          The present sequence encodes the human G-protein coupled receptor having extracellular leucine rich repeat regions, designated IGR7 long form. The LGR4, LGR5 and LGR7 proteins are used to identify ligands for the receptor. The polypeptides and/or polynucleotides are also useful for homologous or related genes, producing compositions that modulate the expression or function of the receptors, gene therapy, mapping functional regions of the receptors, studying associated physiological pathways, in vivo prophylactic and therapeutic purposes, as immunogens for producing antibodies, and for identifying biologically active agents. The polypeptides contain a G-protein coupled seven transmembrane region and a leucine rich repeat extracellular domain. These regions capture and facilitate optimal orientation of its ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
The present sequence encodes the human G-protein coupled receptor having extracellular leucine rich repeat regions, designated LGR7 short form. The LGR4, LGR5 and LGR7 proteins are used to identify ligands for the receptor. The polypeptides and/or polynucleotides are also useful for homologous or related genes, producing compositions that modulate the expression or function of the receptors, gene therapy, mapping functional regions of the receptors, studying associated physiological

The polypeptides contain a G-protein coupled seven transmembrane region and a leucine rich repeat extracellular domain. These regions capture and facilitate optimal orientation of its ligand. The proteins are also expressed in diverse tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1744

cc (AAM99936-AAM99984) useful for preventing, treating or ameliorating cc (AAM99936-AAM99984) useful for preventing, treating or ameliorating cc medical conditions e.g. by protein or gene therapy. The genes are cc isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant) agonists are useful cc in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast cc and ovarian cancer and other cancers of the adrenal gland, bone, bone cc marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune cc disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (c) wound healing; (e) neurological diseases e.g. cerebral anoxia and cc epilepsy; and (f) infections diseases such as viral, bacterial, fungal cc Note: The sequence data for this continual contents of the sequence data for this contents. The sequence data for this patent did not form part of ted specification, but was obtained in electronic format WIPO at ftp.wipo.int/pub/published_pct_sequences. format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               08-DEC-2000;
